

The 2-hour class that turned
non-coders into AI *operators*.

— IN 120 MINUTES

The shift from *user* to *operator*.

— WHAT THEY WALKED IN AS —

"I've used ChatGPT a few times."

"All these models look the same."

"I don't really know when to trust it."

"It's impressive but kind of scary."

— WHAT THEY WALKED OUT AS —

Fluent in **3 different models**, side by side

A mental model of **how LLMs work** — in plain English

A framework for the **4 limits** of AI

1 prompt they'll use at work tomorrow

— 6 TOPICS · 120 MINUTES

What we *covered*.

— 01 —

Evolution
of AI

— 02 —

The model
landscape

— 03 —

How LLMs
work

— 04 —

The
value chain

— 05 —

Where it
breaks

— 06 —

The chatbot
ceiling

— 1 PROMPT · 6 SUB-TASKS

How many can a chatbot *actually* do?

THE PROMPT I GAVE CHATGPT

"I run a small bakery in Mumbai. Help me launch a new product line."

01	✗	Research what's trending this month	no live web on free tier
02	✓	Draft 3 Instagram posts	works
03	✗	Generate 3 images	tier limits
04	✗	Schedule across next week	no scheduler
05	✗	Email the partner	no email access
06	✗	Set a 30-day reminder	no calendar

COMPLETED FAILED

4 / 9

— A FAILED DEMO IS A CURRICULUM UPDATE

My most rehearsed demo — *broke*. And that's the win.

— WHAT I PLANNED —

Ask ChatGPT about a fake 2019 Indian Supreme Court case to demo hallucination.

I've used this exact prompt for 2 years. It always invented a confident, fully-cited fake judgment. Every time.

— WHAT ACTUALLY HAPPENED —

All 3 models searched the web in real time and refused.

ChatGPT, Claude, Gemini — every one of them said: "This case does not exist." The hallucination demo refused to hallucinate.

*A failed demo is the best curriculum update. **The field outran my deck.***

— THE LINE THAT STUCK

A chatbot is a *brain in a jar*.

*Disconnect the limbs and the brain can still think.
It just can't **do**. That's a **chatbot**. Connect them — that's an **agent**.*

— BY THE NUMBERS

What I'm taking away — from *teaching*, not teaching about.

60%

Hands-on is the floor.
*Anything less and you're
delivering a webinar, not a class.*

0 slides

Open with a demo.
*Not a definition. Not a self-intro.
A demo earns the next 110
minutes.*

3 tabs

Compare 3 models live.
*Builds intuition faster than any
30-minute lecture on model
differences.*

1 demo

Plan for it to break.
*The failure usually teaches more
than the script.*

1 prompt

End with the prompt they'll use tomorrow.
*Nothing else compounds. If they don't leave with a tool, they leave
with a feeling — and feelings fade by Friday.*

— FROM 1 / 6 TO 6 / 6

Next session — we *build the agent*.

— SESSION 01 · CHATBOT —

— SESSION 02 · AGENT —

1 / 6 TASKS

Chatbot

Brain — no limbs.

6 / 6 TASKS

Agent

Brain + hands + eyes + ears + calendar.

i

— CONFIGURE —

System prompt, plain English.

ii

— CONNECT —

Web · email · calendar · files.

iii

— RUN —

6 steps. Live. No code.

— IF THIS WAS USEFUL —

Want the full *workbook*?

Comment "**workbook**" below

I'll DM you the prompts, exercises, and take-home template — free.

& What's the one thing about AI you'd most want to learn? I'm building Session 02 around what people actually struggle with.

Shantanu Chandra

Teaching AI fluency to professionals who don't write code.
